Projects

Dapp for Online fee Payment Portal
MERN, Solidity , Remix

Developed a MERN-based application allowing students to pay fees using cryptocurrency. The platform ensures secure transactions and a user-friendly interface. Designed to use the modern world payment methods and hepls NRI Students to pay their Fee conveniently.

Hospital Appointment Booking and Patient-Doctor Management System (Ongoing)
MySQL,React

Developing a web-based application using React and MySQL for **Aruna Cardiac Care, Tirunelveli** to streamline hospital management. The system facilitates patient appointment booking, doctor schedule management, and lab technician result uploads.

MusicApp
Java Swing , MySQl

MusicApp is a desktop-based music player and playlist management application, the primary goal of the app is to allow users to organize, store, and play their favourite songs via playlists.

Internship

MERN Stack Development
from WebStack
10 weeks

During my MERN Stack internship, I developed a hotel booking website similar to Airbnb, featuring user authentication, property listings, booking management, and payment integration. This project strengthened my full-stack development skills and real-world application experience.
